Architecture

The orchestrator owns the global state.

Worker agents consume immutable tasks and publish their results independently.

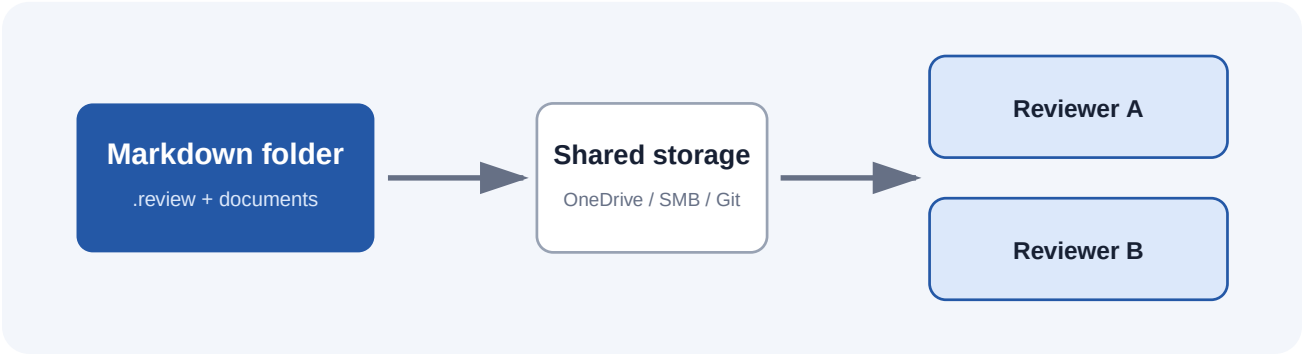

Processing flow

Mermaid diagram 1 · source sha256:71b6ac7263513...

Required capabilities

Capability	Pilot status	Audit behavior
Mermaid diagrams	Required	Source and rendered SVG are hashed
Embedded images	Required	Bytes are frozen in the blob store
Tables	Required	Rendered in the client and PDF

Local-first review flow

The review also records ordinary external references such as the CommonMark specification without downloading the linked website.

Review record

1 thread(s), 0 unresolved, 1 approval(s).

1. Resolved comment

Document	architecture.md:3
Revision	revision_20260813T122955204Z_77c4c21ccab549a6bec195810779ca31
Author	Mirek
Target	text

Quoted content: "The orchestrator owns the global state."

Should this ownership live in the runtime layer?

Reply — Mirek: Yes. The next revision will clarify that boundary.
